Commonly Reported HVAC Problems

The next most common step in AC troubleshooting is checking for a dirty air filter. Your AC system is more than just the outdoor unit sitting by the side of your home. Most systems also include an indoor air handler unit, usually a furnace or fan coil. The indoor unit should include an air filter that traps dust, dirt and other airborne particles.

Troubleshooting Common Air Conditioner Blower Problems ...

Turn off the power. Flip the air conditioning service and furnace circuit breakers in your main electrical panel to the “Off” position. Next, turn off the power switch right at the furnace or air handler. Then yank the disconnect block (Photo 1) and clean the condenser coils (Photo 2).

5 Signs Your HVAC Blower Motor Needs to Be Replaced

Possible Cause - Dirty Air Conditioner Blower. The most common root problem underlying a frozen air conditioner is a dirty air conditioner blower that’s clogged and congested with dust and dirt. This happens most often in old units that have not been receiving proper maintenance. Luckily, this is one of the easiest problems to repair.

Air Handler & Blower Unit troubleshooting & repair for Air ...

First make sure there is power to the indoor unit and that a switch or breaker isn't off. Some indoor units (Heat Pumps) have breakers right on the Air Handler itself. But also check the main breaker panel. Some units have a shutoff switch on the side of the unit or an Emergency Switch located on a wall.

Bing: Air Handler Blower Unit Troubleshooting

You can check for this problem by listening to the AC unit when it is turned on. If you can hear the blower motor running but no air coming out of the unit, then it is possible the problem is with the fan belt itself. Replacing a fan belt is quite simple and can be done by yourself with the correct part.

Air Handler Blower Unit Troubleshooting

Your indoor air handler coil could be blocked Ordinary house dust and debris like soot or pollen can block indoor air handler coils. For your indoor air handler, try to wipe away any buildup of dust on the coil and change the air filter often. Your filters may be clogged or dirty Clean or replace the filters.

Contact your Armstrong Air dealer if the problem persists. Dirty or blocked ductwork. Check your indoor unit to see (or hear) if the blower is running. Then go to different vents in your house to feel for airflow. If you do not feel any air, contact your local Armstrong Air dealer for duct cleaning services.

Goodman Central Air Conditioner Troubleshooting ...

An air handler unit consists of an evaporator coil, air filter, blower motor, electrical and electronic components. It regulates

your home temperature by circulating warm or cool indoor air throughout your entire home. Here are four common signs you should look for to determine if your air handler is not working properly in Orlando, FL.

Furnace or A/C Blower Fan Won't Stop Running What to Check ...

1 Turn off the power to the air conditioning air handler or furnace. If the air handler is a gas furnace, turn off the gas at the gas valve that serves the furnace. 2 Remove the door on the front of the air-handler cabinet so you can access the air filter. Pull out the filter and clean or replace it as necessary.

Common Air Handler Problems & Maintenance Schedules

POSSIBLE CAUSE: The evaporator coil could be clogged or dirty causing it to freeze and reduce the unit's cooling capacity.
RECOMMENDED ACTION: Try turning the thermostat off for 1-3 hours to see if it will defrost. Also, check for signs of water leakage below the indoor unit.
