exploiting a vulnerability in Exim Mail Transfer Agent (MTA) software since at least August 2019. The cyber actors responsible for this malicious cyber program are known publicly as Sandworm team....

Exim Internet Mailer

A message transfer agent receives mail from either another MTA, a mail submission agent (MSA), or a mail user agent (MUA). The transmission details are specified by the Simple Mail Transfer Protocol (SMTP). When a recipient mailbox of a message is not hosted locally, the message is relayed, that is, forwarded to another MTA.

Sandworm Team Exploiting Vulnerability in Exim Mail ...

It's the default mail transport agent installed on some Linux systems, runs on many versions of Unix, and is suitable for any TCP/IP network with any combination of hosts and end-user mail software.Exim is growing in popularity because it is open source, scalable, and rich in features such as the following:

Exim - the mail transfer agent | Philip Hazel | download

Russian military cyber actors, publicly known as Sandworm Team, have been exploiting a vulnerability in Exim mail transfer agent (MTA) software since at least last August. Exim is a widely used MTA software for Unix-based systems and comes pre-installed in some Linux distributions as well. The vulnerability being exploited, CVE-2019-10149, allows a remote attacker to execute commands and code of their choosing.

Exim : The Mail Transfer Agent by Philip Hazel (2001 ...

Exim is the default mail transport agent installed on some Linux systems; it runs on many versions of Unix and is suitable for any TCP/IP network with any combination of hosts and end-user mail software. It is open source, scalable, rich in features, and - best of all - easy to configure. This official guide is written by Philip Hazel, the creator of Exim.

Specification of the Exim Mail Transfer Agent

Russian cyber actors from the GRU Main Center for Special Technologies (GTsST), field post number 74455, have been exploiting a vulnerability in Exim Mail Transfer Agent (MTA) software since at least August 2019, warns a new National Security Agency (NSA) cybersecurity advisory.

Exim: The Mail Transfer Agent by Philip Hazel, Paperback ...

Exim, the MTA would be an appropriate book for someone who does not know anything about e-mail and suddenly needs to manage a server, and EXIM would be a good e-mail server for this person to use. EXIM is the default MTA in Debian and other Unix distributions too. Exim, the MTA, has been written entirely, except for contributed patches, by Philip Hazel, who continues to maintain it.

Exim: The Mail Transfer Agent: Hazel, Philip ...

Exim is a mail transfer agent used on Unix-like operating systems. Exim is free software distributed under the terms of the GNU General Public License, and it aims to be a general and flexible mailer with extensive facilities for checking incoming e-mail. Exim has been ported to most Unix-like systems, as well as to Microsoft Windows using the Cygwin emulation layer. Exim 4 is currently the default MTA on Debian GNU/Linux systems. Many Exim installations exist, especially within Internet service

exim(8): Mail Transfer Agent - Linux man page

The U.S. National Security Agency (NSA) warned that the Sandworm team is exploiting a vulnerability that affects Exim Mail Transfer Agent (MTA) software. In a cybersecurity advisory published on May 28, the NSA revealed that the Sandworm team has been exploiting the Exim MTA security flaw since August 2019.

News & Features

Exim is a mail transfer agent (MTA) developed at the University of Cambridge. It is a large program with very many facilities. For a full specification, see the reference manual. This man page contains only a description of the command line options.

Exim: The Mail Transfer Agent: Hazel, Philip: Amazon.com ...

Exim is a message transfer agent (MTA) developed at the University of Cambridge for use on Unix systems connected to the Internet. It is freely available under the terms of the GNU General Public Licence. In style it is similar to Smail 3, but its facilities are more general. There is a great deal of flexibility in the way mail can be routed, and there are extensive facilities for checking incoming mail.

Exim - Wikipedia

CVE-2019-10149 is a critical security vulnerability in the Exim mail transfer agent (MTA) software. The flaw is located in Exim versions 4.87 to 4.91 included, and is described as improper validation of recipient address in `deliver_message()` function in `/src/deliver.c` which could lead to remote command execution.
