Earthquake-Resistant Design Concepts

7.2.3 Conceptual design remarks The efficiency of a seismic isolation solution is measured by the seismic force reduction it entails in the substructure of the bridge, namely the ratio $V_{l,i}/V_{f,i}$, where $V_{f,i}$ is the seismic shear force of element i of the 'fixed' system and $V_{l,i}$ is the corresponding force of the isolated system, while keeping the displacements within manageable limits.
