The ability to tolerate emotion (self-soothe; regulate affect) is a primary task of treatment, and accounts for the importance of Phase I. Attempts to 'process' trauma in the absence of ability to self-regulate can precipitate overwhelm and re-traumatization.

'Processing' of complex trauma is a Stage II task and should not be encouraged in the absence of the foundational self-regulatory work of Phase I.

## **Trauma Therapy: A Somatic Approach**

Trauma-informed practices are rooted in empathy. They are a model to reduce the stigma that often surrounds mental and behavioral health disorders like depression, harmful substance use, chronic disease, and other effects of trauma. It is important to think about how we are approaching and supporting individuals who have experienced trauma.

## **Best practice principles for complex trauma client work**

The following key principles of trauma-informed care should serve as a guide for all health care providers and staff: Establish the physical and emotional safety of patients and staff; Build trust between providers and patients; Recognize the signs and symptoms of trauma exposure on physical and mental health; Promote patient-centered, evidence-based care
