Bing: Underground Power Cable Distribution Cable

Underground distribution cables range from 6.6 kV to 33 kV in voltage rating, and XLPE cables that employ cross-linked polyethylene as insulator are generally used. It may be said that the history of XLPE cable is the history of countermeasures against water tree, a process of insulation deterioration due to water absorption.

Underground Power Cable Distribution Cable

Underground cables are usually employed to deliver 3 phase power. A 3 cored cable is preferred up to 66 kV. Beyond that, insulation required for the cable is too much. For higher voltages, 3 cored constructions become too bulky, and hence, even with some limitations we employ single cored cables [Also read: Electric power transmission system]
